

The Profitable Way to Refinish Alloy Wheels!

Traditionally, Bodyshops, Franchised Dealerships and De Fleet Centres alike have had to carry out alloy wheel refinishing in the spraybooth in order to comply with rigorous Health, Safety and Environmental legislation. As a result, higher value finishing work is often delayed, awaiting availability of the booth. This creates a bottleneck, restricting productivity and potential profits...

...Wheelsmart provides a unique solution!

Why Wheelsmart?

- Eliminates the need to use a spraybooth
- Frees-up the spraybooth for higher value jobs
- Occupies minimal floor space
- Quick and easy to install
- Simple to use
- Highly manoeuvrable
- Captures all overspray fumes and particulates
- Complies with Environmental legislation
- Complies with Health and Safety legislation
- Designed to work with all 2007 compliant coatings

Fume extraction through wheel centre 'easy change' primary bag filter incorporated in turntable protects the flexible duct section from contamination.

'Easy place' masking ring for fume retention 2 sizes for 14" to 21" wheel.

'Easy turn' turntable for manual wheel rotation when spraying.

Compressed air filter regulator has a maximum pressure setting to ensure the correct air pressure for atomisation of the paint materials within the spraying area.

Low airflow control feature ensures safe operation.

Powerful and quiet extraction unit connects to the Wheelsmart unit and vents external to the building.

Durable work top.

Visual indication of extraction efficiency.

Robust and easily manoeuvrable base.

Quick hose connection.

Secondary bag filter reduces particulate emissions to well below the 10mg/m³ EPA limit.

Tough wire coil flexible 10 metre long hose.

Unique benefits for the Bodyshop

Your spraybooth is a vital resource. Wheelsmart frees the booth for bigger and more profitable jobs, as well as keeping you legal. By maximising booth capacity in this way, Wheelsmart can substantially increase your Bodyshop's productivity and profitability.

Unique benefits for Franchised Dealers

Due to the pressure on spraybooths from more lucrative jobs, many franchised dealers have sub-contracted wheel refurbishment and refinishing to mobile SMART repair companies. This work has been carried out on site, either in set-aside workshop areas or on the car park. Strict new legislation now places responsibility for hazard management and the health and safety of people on your site firmly with your business, irrespective of who is carrying out the work. Wheelsmart not only enables you to provide a profitable in house wheel refinishing service, it also ensures that you comply with the law.

Wheelsmart explained

Wheelsmart is an innovative at-source extraction system developed by Junair, which allows the alloy wheel refinishing process to be carried out to the highest standard in workshops and other suitable areas, without the need for a conventional spraybooth.

Safe and fully compliant

As with a conventional spraybooth, Wheelsmart has a 2-stage filtration system. It meets the requirements of the emissions regulations set out in the Environmental Protection Act and is well below the particulate emission levels of 10mg/m. Wheelsmart complies with relevant Health and Safety directives and in independent tests, the product provided a Workplace Exposure Limit (WEL) 74% below the maximum allowed under law.

*international patent pending
